TechLab Description

URL: trends.techlab.works

- Web platform for sharing tech trends and projects by TechLab
- Targeted at students, staff, educators, researchers and external partners
- TechLab aims to provide a source of information for research projects.

TechLab Previous Issues

- Need for a redesigned UI/UX for easier and more engaging browsing.
- **Basic search capabilities**, only shows trends and related projects
- No navigation between articles back to home page
- Lacks tagging system

Old Website Walkthrough - Search

Trends

Virtual Reality (VR)

Projects

360 Laboratory Filming

Can we cheaply produce full spherical panorama footage of our laboratories while that are in use?

Bicycle Ride

VR - Bicycle ride with additional cues like wind (fan) etc. (VR 'presence') <https://www.youtube.com/watch?v=8x1AdyFEhgQ>

Cliff Winch

VR - Cable winch up cliff with vertical treadmill (vertigo, rescue and high wire access training) <https://www.youtube.com/watch?>

Harbour Bridge Climb

VR - Crossing a beam between arches of the Sydney Harbour Bridge (vertigo, phobias) https://www.youtube.com/watch?v=1lk5uN_aeOo

Laparoscopic Surgery

VR - Using fine surgical instruments <https://www.youtube.com/watch?v=Vixt9at7pYQ>

Optokinetic Perturbing Stimulus

VR - Optokinetic perturbing stimulus (rotating dot cloud) (posturography rehabilitation)

Assisted Living

VR - Interactive house design for mobility chair users <https://www.youtube.com/watch?v=irqWSxE8G1M>

Casino Lounge

VR - Casino ?VIP Lounge? with environmental sights and sounds (problem gambling) <https://www.youtube.com/watch?v=dvu5r17YwVU>

Desert Mine Clearance

VR - Desert mine clearance task using a virtual metal detector <https://www.youtube.com/watch?v=z7nWtBukjyl>

Hospital

VR - Hospital ward, ICU, surgical theatre, MRI suite, pharmacy, meeting room, offices (training, architecture) <https://www.youtu>

Military Checkpoint Inspection

VR - Military checkpoint with an undercarriage inspection mirror for IEDs <https://www.youtube.com/watch?v=VCZNcStw6ll>

Paris Tricycle

VR - Tricycle ride around Paris for navigation and spatial awareness <https://www.youtube.com/watch?>

TechLab Trends Article

The Trend Report

Home ICT Techlab Principles Search

Natural Language Processing

What is it?

NL: Human language

- though we focus on text
- linguistics, rather than the study of a particular language

NLP: Drawing information from language

- decoding language-encoded messages
- want high accuracy on unseen text
- predictive models

SNLP: Statistical models drive that prediction

- data driven
- models parametrised by counting events in text
- learning from labelled or unlabelled text
- models embody what is usual, rather than what is possible

TechLab Trends - Requirements

- Choosing the 'type of user' will filter articles on the home page and allow admins to **monitor type of engagement**
- A need for more a sophisticated search for a **more tailored user experience**.
- Improved monitoring of site engagement

User Stories

Priorities through:

- Team capability
- Client's request
- Client's Interest

User (Reader) stories

As a reader I would like to be able to **search for articles** so that I can **find related articles** I am interested in.

As a reader, I would like to **expand information specifically related to my role** as a student/tutor/academic researcher so that I can see **information only relevant to me.**

As a reader, I would like to browse through the website without being overwhelmed so that I can **browse for longer with comfort**

As a reader I would like to **look through categories** and **tags** so that I can find all **related articles** at once.

As a reader, I would like to **filter the website's content using tags** so that I can search for content interesting to me.

As a reader, I want to **know the length of articles** so that I can determine whether I **have enough time to read through it.**

As a reader would like to **lazy load articles with infinite scroll** so that I can **seamlessly browse articles.**

User (Reader) stories with top-priority

As a reader, I would like to **expand information specifically related to my role as a student/tutor/academic researcher** so that I can **see information only relevant to me**.

- Client requested feature (Point3 & 4)
- Expected sprint 4-5 days
- Acceptance criteria set by checking with the clients and being able to categorise information on different levels.
- Ensure progress with client through weekly meetings

- **Functional requirement:** Readers should be able to select level of information they want to read and expand on more information upon their request
- **Non-functional requirement:** The website should display enhanced accessibility of organised content to the readers of different roles.

client's request

- One page loading and lazy loading as the user scroll
- Story based information
- Clearer instruction/demonstration on the website for different users
- Providing them further information upon their request(Trends -> Projects -> Experiments -> Codebase)
- Midway between having the website for both maintenance and users
- Reddit design - one page field
- Increase engagement (Not to prioritise)
- Click to the author's link to see their posts

User (Reader) stories with top-priority

As a reader, I would like to **look through categories and tags** so that I can **find all related articles at once**.

- Our initial design that the client showed interest
- Expected **sprint 9-10 days** to **upgrade existing search bar** which has no advanced function and tags.
- **Acceptance criteria** set by the clients through meetings.
- Ensure progress with client through weekly meetings and look for any need for changes.

Our initial design

- Scroll and lazy load as the user scroll (they liked this one)
 - More advanced search option
 - Categorisation through tags
 - Estimation of time taken to read article (they liked this one)
- **Functional requirement:** Readers are able to navigate to chosen topics via reader selected categories or tags.
 - **Non-functional requirement:** Categories and tags should help the users to browse through the TechLab report with increased efficiency compared to original version.

User (admin) stories

As an author, I would like to be able to easily change the contents of the reports so that I can easily edit and add changes to the existing posts

As an admin, I would like to be able to easily add tags to an article so that I can easily categorise the content.

As an author, I would like to provide quick navigation to other social networking sites so that the readers can actively communicate with us.

Priority

As an author, I would like to easily add new admins onto the list so that I can easily give specific permissions.

As an admin, I would like to expand on articles about trends by providing sections for Trends -> Projects -> Experiments -> Codebase, so that I can easily add more information about a trend.

As an admin, I would like a way to capture user interaction so that I can capture and analyse the type of engagement with the content.

User (Admin) stories with tests

As an admin, I would like to be **able to easily add tags to an article** so that I can **easily categorise the content**.

- Current tags contain nothing but client showed interest in using them.
- Estimated to take 2-3 days to generate tagging system.
- Acceptance criteria would include correct navigation, use and display of tags in the article but also by clients..
- Ensure progress with client through weekly meetings and look for any need for changes..

- **Functional requirement:** Admins should be able to easily add or edit tags through edit tag or add tag function.
- **Non-functional requirement:** If implemented, it should increase the quality of maintainability of the articles and reports for the admins as it supports organisation of articles based on categories for the admins.

Stretch Goals

As a user, I would like to be notified of upcoming events and view all upcoming events

As an author, I would like to be able to notify users of upcoming events related to TechLab

As a user, I want to be able to have a storage of my last viewed, favourited and 'read later' articles in order to improve viewing experience

As a user I want to have an integrated chatbox so that I can be able to communicate with support quickly and determine a field I am interested in..

As a user I would like to have a modal design when browsing through articles, this way it allows me to easily navigate around the website.

Front End

Front-end - Tools & Frameworks

React:

- Javascript framework/library
- Chosen for its compositional nature (high reusability)
- High capability (safety net if client expands requirements)
- Fast development compared to vanilla JS

HTML/CSS:

- As standard

Sass:

- CSS preprocessor
- Improves maintainability and structure of CSS (7-1 architecture)

Jest:

- Javascript unit and integration testing
- Chosen because it includes testing, coverage reporting and mocking
- Familiar with it so no learning time required

Enzyme:

- Testing library build by airbnb for testing React components
- Used to mount components on a virtual DOM for interaction/assertion

Cypress.io:

- E2E testing library
- Can traverse a website simulating events
- Will be used for total system tests ensuring front and back end communicating correctly

File	% Stmts	% Branch	% Funcs	% Lines	Uncovered Line #s
All files	90.32	50	82.35	90.32	
components	93.75	50	87.5	93.75	
App.js	0	100	0	0	22
HeaderBanner.js	100	100	100	100

Test Suites: 9 passed, 9 total
Tests: 11 passed, 11 total
Snapshots: 0 total
Time: 2.355s, estimated 3s
Ran all test suites related to changed files.

Watch Usage

- > Press a to run all tests.
- > Press f to run only failed tests.
- > Press q to quit watch mode.
- > Press p to filter by a filename regex pattern.
- > Press t to filter by a test name regex pattern.
- > Press Enter to trigger a test run.

Front-end - Test Examples

Story #1: As a reader I want to search for articles so I can find related articles that I'm interested in

Test plan:

System test: Cypress will be used. It will trigger a search and assert at least one article has been returned and rendered by the search by looking for the component's data-componentType attribute

An enzyme test will be written with a mounted `<SearchResultsContainer />` component which will make an API call to a mocked endpoint. We will assert the `<SearchResultsContainer />` renders the correct SearchResult components (based on the mock)

Story #2 : As a reader I would like to look through categories and tags so I can find all related articles at once

System test: Cypress - trigger a search with a specific tag set, assertion iterates over each search result ensuring all have the matching tag rendered in the DOM

Back End

Back-end - Tools & Frameworks

Python3.5/Django

- MVC web framework
- Thoroughly featured for complex web development
 - Built-in database features
 - Built-in user system
 - Administration tools
 - Industry standard security implementations
- Used in large-scale industry applications
 - Social media: Instagram, Spotify, Youtube
 - Cloud services: Dropbox, Bitbucket
- Framework used in existing implementation
 - Does not require system changes to server

Back-end - Tools & Frameworks

MySQL Databases

- Reliable, secure DBMS, used commonly in industry applications
 - Military/Government applications: US navy, NASA
 - Social media/News: Tumblr, Twitter, BBC News
- Django support for MySQL 5.6+
- DBMS used in existing implementation

Quality Assurance

System Architecture

Django - RESTful API framework

- Web framework for Python 3.5
- Used for the original Techlab Trends codebase
- Front-end: Integrates ReactJS to serve practical interfaces
- Back-end: Integrates MySQL using Connectors to fulfill database-related requirements.

Back-end Testing

- Purpose of system back-end is to resolve API calls
 - Unit testing: Standard Python *unittest* module for Django
 - API reference to be used as foundation of testing I/O, e.g.
For valid input "GET /article/[id]",
Expect JSON object:
{ success: true, article: { title: [article *id* title], content: title: [article *id* content], image: title: [article *id* header image],
author: [article *id* author], tags: [tags associated with article *id*] } };
- Security testing
 - Common SQL injection vectors
 - Cross-site vulnerabilities (XSS/CSRF)
 - Stress testing for availability under high load

Group Collaboration and processes

Bitbucket - Git repository for codebase & files

Client Meeting Week 5

Subject: Client meeting Week 5

Project Name: TechLab knowledge sharing and reporting platform upgrade

Facilitator: Jim Cook / Viji Venkataramani

Prepared by: Hand of the Fek

Mode: Face to face

Date: Monday 2nd September

Time: 12:00pm – 12:40pm

Attendees: Cameron, Adam, Vicky

Absent: Clinton, JooHwan

What has been completed?

Item	Description	Decision	Who
Wix Design	The final structure / reference of the design should be completed and referenced on Wix.	Input based on designing a landing page should be discussed with team.	Adam/Vicky
HTML layout	Rendering a basic HTML layout of the website with a top pane and articles.	Raise any concerns with team and get input from client.	Cameron
Scope Document	Scope document containing features such as Out of Scope and In scope requirements should be included.	Signed scope with clients and ask about possible stretch goals.	Adam
Deliverables Timeline	A plan for the projected deliverables has been completed and available on Bitbucket.	Confirm that the timeline is sufficient with client and team.	Adam
Social Media Links	Social media buttons that link to the TechLab site.	None required	Cameron

Directly Responsible Individuals (DRI)

- Promotes taking ownership for tasks and therefore holding members accountable
- Alleviates strain on manager

Group Roles

Git Expert - Cameron

Slack Expert - Clinton

BitBucket Expert - Adam

XP Expert - JooHwan, Vicky

Critique

What has worked well

- Members are present at offline meetings and responsive offline - great communication
- Trello board is great at keeping track of tickets and goals
- Experts made sure the team is aware of all the components used in the project
- XP roles assigned each member responsibilities as a group member. E.g. the manager helps run smooth meetings and delegates tasks quickly

What needs improvement

- Changed Trello board so each member has a section for their tasks to have clearer division of tasks
- Decomposition of tasks so that each member was directly responsible for more specific work packages.

Thank you

Front-end Testing
