Unit of Study	SOFT3888
Team name	Hand of the Fek
Project Name	Project 23 TechLab knowledge sharing and reporting platform upgrade
Project start date	Monday, 12/08/2019
Project end date	Monday, 28/10/2019
Project point person	Adam Ghanem
Report Date	Sunday 22/09/2019

Quick description	To update the techlabs website to be more accomodating and be able to allow certain groups of users to access and filter material relative to their needs.

Status item	Status up to last week	Planned for next week
Scope	Top banner and panel design based on Wix in progress. Navigation updated to fit final design on Wix. Renders article previews and CSS added Search functionality with DB in progress. Article Database complete.	Search functional but without Tagging functional search bar that can search for articles but has no tagging ability. Basic WYSIWYG complete. Tagging with search backend queries
Time	To stay on time, the main deliverables to meet for next is to: - be able to have some basic CSS complete, - top headers/footers matching the Wix design - have the Article Database complete.	To stay on time the team needs to: ● Finalise way to represent events. ● Build on CSS of the website. ● Think of a way to implement wcag2.1 elements into the design of the website. ● Come up with mobile phone design

Quality	Tests hopefully should be done for the Article Database and the updated navigation before the actual components are implemented.	Testing is prioritised this week, with multiple testing jobs being issued to group members.
Planned Activities	Meet with the tutor to discuss details of report. Discuss final design with UI/UX guru, John El Khoury Antonios Review Report 1 Complete Week 7 Deliverables - Top header and footer CSS and design - Progress with search functionality - Article Database Testing for Week 7 Deliverables.	CSS progression to develop some more CSS for the website Read through wcag2.1 and implement what is required. Talk to clients about progress with design. Implements WYSIWYG editor basic version on articles.
Achievements	Achievements for this week will be to finish the design and implementation of both an ERD diagram and the Article Database. Also being able to complete the search functionality with the database would be great progress.	Hopefully if a complete wcag2.1 design of the website can be completed that would be great. This would reduce the amount of work required to adapt the current website to the design.
Major deliverables	Have some basic CSS complete (Header and footer CSS) Top headers/footers matching the Wix design Article Database complete.	Implement WYSIWYG editor version. Implement search functionality.
Major issues	Need to fix up Wix design to match updated client requests so we are not implementing something that the client has already changed their minds about.	Need to make sure the WYSIWYG editor can support embed videos. If not the editor needs to be replaced with another.
Major risks	Backend development falls behind frontend.	Article database is not sufficient for the search queries.

External dependencies	None	None
Estimated effort (h)	18	15
Recorded effort (h)	21	14
Overall Status (RYG)	Green	Green
